

EXTENDED NON-USE OF YOUR WINTERHALTER MACHINE

During this uncertain time, it is important that steps are taken to maintain your Winterhalter equipment, in order to make sure it is ready to go when you are.

For Winterhalter service call **01908 359059** or visit www.winterhalter.com/uk-en/service

SHUT DOWN

1

Drain down machine using automatic cleaning cycle

2

Remove wash arms and filters. Clean, rinse and leave to dry

3

Wipe down interior of machine and leave door open to fully dry

4

Re-fit wash arms and filters. Close the door to protect from dust and insects

5

Remove chemicals if possible. Turn off water and electrical supply*

START UP

1

Wipe down interior and exterior of machine

2

Rinse wash arms and filters then re-fit in machine

3

Top-up chemicals or reconnect lances. Fill water softener with salt if required

4

Turn on water and electrical supplies

5

Turn on machine and allow to fill

***IMPORTANT:** If you have a Reverse Osmosis machine (Excellence/AT/RoMatik) then DO NOT turn off water or electrical supplies. These machines will periodically flush the membranes to keep them moist.

NOTE: In order to reduce the risk of legionella, your machine should be flushed every 2-3 weeks. To do this, turn on your machine and allow to fill, then run 5 wash cycles and follow the Shut Down instructions.
