## Summary

- All 150 local authorities (LAs) in England were approached for information regarding school catering services. Of these, 150 (100\%) responded, providing information related to both LA organized catering services (whether provided directly or contracted on behalf of schools in the LA) and non-LA catering services.
- The response rate is sufficiently high, and findings are in sufficiently good agreement with other nationally collected data, to be confident that the findings presented in this report are representative of Local Authority organized school meal provision in England. The coverage relating to take up of school lunches is over $90 \%$ of primary schools and $73 \%$ of secondary schools, making this the most comprehensive picture of take up in England ever reported.
- LA catered or contracted provision accounted for $80 \%, 41 \%$ and $70 \%$ of primary, secondary and special school lunch provision, respectively, the remaining 20\%,59\% and $30 \%$ being provided privately or in-school.
- Take up of school lunches was $39.3 \%$ in primary schools and $35.0 \%$ in secondary schools.
- Average school lunch prices were $£ 1.77$ in the LA catered primary sector and $£ 1.88$ in the LA catered secondary sector, each up $6 \%$ on the preceding year.
- In primary schools, $75 \%$ had a full production kitchen, $6.5 \%$ had facilities for regeneration or a mini-kitchen, $13.5 \%$ had food transported from another school or venue. $3 \%$ of primary schools had cold food only or FSM only service, compared with $5 \%$ reported in 2007-2008. In secondary schools, $94 \%$ had full production kitchens.
- As of March 2009, $94 \%$ of primary and $35 \%$ of secondary LA catered school lunch provision was thought by respondents to be compliant with the final food-based and nutrient-based standards for school lunches. This was an encouraging result considering secondary schools did not have to comply with the nutrient-based standards until September 2009.
- $64 \%$ of LAs indicated that they thought attitudes in primary schools had improved in the last year, $36 \%$ thought they were about the same, and none thought that primary pupils' attitudes were worse. For the secondary sector, $25 \%$ of LAs thought attitudes had improved, $60 \%$ had remained about the same, and $15 \%$ thought that attitudes were worse.

## 1 Introduction

The School Food Trust ("the Trust") has been established to support the implementation of changes in school food in England consistent with new standards for school food published on 19 May 2006 by the Department for Education and Skills (DfES), ${ }^{1}$ revised and updated on 17 August $2007^{2}$ and amended on 11 July $2008 .{ }^{3}$ The original national targets for schools recommended by the School Meals Review Panel ${ }^{4}$ to the DfES ${ }^{\text {a }}$ were an increase in take up of school meals of four percentage points by March 2008 and ten percentage points by autumn 2009, relative to the baseline of take up in the 2005-2006 financial year. The baseline figures were based on the first annual survey of school meal take up in England commissioned by the Trust in May 2006 (and published in July 2006). ${ }^{5}$ These targets have now been revised to reflect the longer timescale needed to introduce the changes in catering provision nationally. ${ }^{6}$

This is the fourth annual survey of school meal take up in England; the three previous surveys were carried out at the end of the financial year from 2006 to 2008. ${ }^{578}$ As in previous years, the 2008-2009 survey was carried out jointly with the Local Authority Caterers Association (LACA), and in consultation with other organizations and agencies with an interest in school food provision.

This year has seen the introduction of a standard method for calculating school lunch take up (NI 52). The 2008-2009 school lunch take up figures were reported in July. ${ }^{9}$ The core questions in the survey have and will remain essentially the same each year, but additional questions may be added according to the needs of the Trust, LACA and other interested parties (e.g. Department for Children, Schools and Families (DCSF), Department of Health (DH)). The timing of the survey coincides with the annual assessment by local authorities (LAs) of their turnover and take up of school lunches in the preceding financial year (AprilMarch). The method and timing provide a stable assessment of annual take up of school lunches which is not biased by the seasonal variation known to be associated with take up (highest in the Autumn term, lowest in the Summer term) and avoids the problems of interpretation associated with findings based on a single census date chosen at one point in the school year. It also provides LAs with an opportunity to reflect on factors associated with changes in take up over the previous year. The present report is similar in format to, and makes reference to, the findings from the Trust's earlier annual surveys of take up.

[^1]
## 2 Methods

### 2.1 Survey design

The survey was designed jointly by researchers from the School Food Trust and LACA. For the take up of school lunches, meal prices and costs, and catering facilities, LAs were asked to report separately for schools with LA catering (either LA in-house or LA-contracted private contractor) and schools with other catering (school contracted private contractor or school in-house), generally referred to in the tables as non-LA catering.

### 2.2 Questionnaire testing

Prior to administering the survey, detailed consultation took place with LACA, LA caterers and other organisations such as DCSF and UNISON to refine the questions and to ensure that the language and terminology used was specific and appropriate for encouraging accurate and comprehensive responses from recipients.

### 2.3 Sample selection and logistics

Before the questionnaire was sent out all LAs were invited to participate in a series of three conference calls between February and March 2009. These calls were set up to address the changes in the method of computing school lunch take up (including issues in schools with FSM provision only and how to factor in mid-morning break income into take up calculations). The third conference call was held after the questionnaire was sent out to address any general queries related to the updated terminology. The questionnaire was sent to the lead officials in all 150 local authorities. The initial survey was sent out by email in March 2009. Reminder emails were sent from mid-April and telephone calls made to nonresponding authorities. Follow-up emails and calls to LAs to clarify responses continued until the end of June.

### 2.4 Data entry and coding

The data collected on written or electronic versions of the questionnaire were entered by a specialist data entry firm. Where information was missing or unavailable, follow up contact was made with the respondent to complete the information wherever possible.

### 2.5 Statistical analysis

Statistical analysis for the present report was carried out using the Statistical Package for the Social Sciences ${ }^{10}$ (SPSS). Analyses were undertaken so as to reflect the relative numbers of schools or pupils in each LA. Estimates of take up of school lunches took into account the numbers of pupils on roll in the schools covered by the catering services. Estimates of catering characteristics (e.g. facilities for food preparation) took into account the number of schools catered for by the service provider within each LA. The findings therefore reflect the correct balance of provision across England and do not give undue emphasis to the findings from smaller schools, LA providers or caterers.

### 2.6 Reporting and coverage

All 150 LAs in England responded to the questionnaire, of which 148 were able to provide information on take up for 2008-2009. LAs were asked to provide information on take up separately for their own services (either provided directly or contracted) and for those provided by school contracted, private contractors or school in-house. The complexity of school meal catering means that not all LAs provided information for every question. Where not stated explicitly, information relates only to catering services provided by the LA. The findings in the main do not therefore include the characteristics of schools who arrange
catering services from providers who do not operate within the local authority structure (e.g. private catering companies) or schools who provide their own services in-house. For each table, the number of LAs responding is shown in a footnote ("Base (unweighted)").

### 2.7 Quality assurance

The data entered were double checked for accuracy and consistency by the lead researches for $100 \%$ of the data entry. Where queries or inconsistencies occurred, information providers from the relevant LA were contacted for clarification and changes were made where appropriate. Similarly, respondents were contacted, wherever possible, to complete missing data on the questionnaires.

## 3 Results

### 3.1 Response rates

Responses to the survey were received from 150 LAs. Two of these responses contained insufficient data to be able to compute take up of school lunches. After excluding LAs whose information was of inadequate quality, the calculation of take up was based on responses from 145 LAs for the primary and special sectors combined, and 139 LAs for the secondary sector. For the remaining variables, the number of responses to each question varies, and the number on which each analysis is based is shown as the base number(s) in each table.

### 3.2 Sample characteristics

The total numbers of schools in the responding LAs and the number (and \%) actually catered for by LA and non-LA providers is shown for nursery, primary, secondary and special schools, by region in Table 1. Overall, LA catered or contracted provision accounted for $80 \%, 41 \%$ and $70 \%$ of primary, secondary and special provision, respectively, the remaining $20 \%, 59 \%$ and $30 \%$ being provided privately or school in-house or unknown.

[^2]The findings from the present survey are wholly representative of the national characteristics of Local authority school catering provision. Comparisons with previous findings (2006-2008) may not reflect true change, in part because of less complete coverage in previous years.

### 3.3 School food catering providers

Respondents were asked for information on the type of catering providers for all schools in their LA. Table 3 shows the totals for nursery, primary, secondary and special schools by region. Table 4 shows the numbers or schools for which there is Free School Meal (FSM) only provision.

Information on catering provision in nursery schools has been included here to provide an indication of the level of provision. There is no further analysis or reporting in relation to nursery schools due to the variability of the service.

Unless denoted separately, values in tables for "primary schools" reflect information for primary and special schools combined. The findings are therefore comparable with those reported in previous years.

| Region | Total number of schools | LA contracted catering service LA in-house provider |  | LA contracted catering service - private contractor (one or more) |  | School contracted catering service LA provider |  | School contracted catering service private contractor |  | School catering service - school in-house service |  | FSM service only or no catering |  | Don't know |  |

### 3.4 Take up of school lunch

Of the 150 LAs, 145 provided information on the take up of school lunch in primary and special schools, ${ }^{\text {b }}$ and 139 provided information relating to secondary schools. The take up values for all catering are shown in Table 5, in LA organized catering provision in Table 6, and in non-LA catering provision in Table 7. These findings very nearly replicate those in the NI 52 Statistical Release on school lunch take up ${ }^{9}$. A number of local authorities provided data after the publication of the Statistical Release which they felt it was appropriate to include and which resulted in small changes in the calculated take up values. These are reflected in the tables below. All changes are of the order of $0.1 \%$.

Mean take up for all catering services is $39.3 \%$ in the primary sector and $35.0 \%$ in the secondary sector. In the secondary sector, take up is similar in both LA and nonLA catered provision. In primary schools however, the overall take up reflects the take up in LA catered schools (39.9\%) as it is influenced by the higher proportion of schools with LA catering (13618 schools), compared with the relatively few schools with non-LA catering provision ( 2325 schools) in which take up is $35.8 \%$. Coverage of schools is $93 \%$ in primary and $74 \%$ in secondary. This is a substantial improvement on coverage compared with previous years.

Analysis: weighted by number of pupils attending schools reported on
${ }^{*}$ Number of LAs in region - Responding: number of LAs in which there was catering provision; Reporting - number of LAs in which take up values were reported
The number of schools in LAs reporting is correct, but is a subset of the number of schools in LAs reporting in Table 5. The total number of schools in LAs reporting in Table 6 and Table 7 do not therefore sum to the total number of schools in LAs reporting in Table 5.

Year-on-year changes in take up of school lunch are shown in Table 8 for a subset of 82 LAs who provided information for LA catered services in the primary sector using NI 52 methodology in 2007-2008 and 2008-2009, and a different subset of 81 LAs who provided information in both years based on NI 52 for LA catered services for the secondary sector. The finding suggests that take up is more or less stable in the primary sector (following the introduction of nutrient-based standards in September 2007) and increasing slightly in the secondary sector. Although these values are higher than for England as a whole, they are the best available indicator of change in take up over these two financial years. Within each region there is considerable variation in the change in take up across individual LAs. A possible reason for this variability includes a difference in coverage of schools within the LAs compared with last year ${ }^{\text {c }}$.

### 3.4.1 Contributions of paid-for and FSM to overall take up

When the take up of free school lunches and paid for lunches is calculated relative to the number of pupils registered for FSM and not registered for FSM the figures for the paid element are similar in both the primary and secondary sectors (Table 9). The

[^5]difference in overall take up between the two sectors is explained by the greater take up of FSM in primary schools ( $79.5 \%$ of those registered for FSM) compared with secondary schools ( $65.7 \%$ of those registered).

| Region | Primary \& Special |  |  |  | Secondary |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | LAs reporting | Take up of FSM ${ }^{*}$ | Take up of paid-for meals* | LAs reporting | Take up of FSM ${ }^{*}$ | Take up of paid-for meals** |
|  | $n$ | \% | \% | $n$ | \% | \% |
| North East | 12 | 83.1 | 41.4 | 12 | 63.9 | 37.0 |
| North West | 21 | 81.6 | 36.5 | 21 | 70.1 | 36.3 |
| Yorkshire/Humber | 15 | 78.1 | 37.9 | 15 | 59.6 | 32.8 |
| East Midlands | 8 | 78.3 | 29.2 | 8 | 64.5 | 32.1 |

| Total | 145 | 79.5 | 31.0 | 138 | 65.7 | 30.6 |

Base (unweighted): 145 LAs reporting for primary, 138 LAs reporting for secondary (one LA did not separate secondary take up into paid and FSM)
Analysis: weighted by number of pupils attending schools reported on
*Take up of FSM is reported here as a percentage of the children on roll registered for FSM
${ }^{* *}$ Take up of paid-for meals is reported here as a percentage of the children on roll not eligible for FSM who are paying.
When overall take up of school lunches is partitioned into the contributions by the paid and free elements, (Figure 1and Figure 2) the proportion of the take up accounted for by FSM in primary schools is generally somewhat higher (13.5\%) than in secondary schools ( $8.6 \%$ ). The split between paid for and FSMs varies between LAs and hence between regions, with Inner London having the greatest contribution to overall take from FSM, and the South East the lowest in primary schools and the East of England the lowest in secondary schools. This generally reflects the levels of deprivation within the regions.

Figure 1: The percentage contribution of paid and free school lunches to overall take up in all primary \& special schools in England, by region, 2008-2009

Figure 2: The percentage contribution of paid and free school lunches to overall take up in all secondary schools in England, by region, 2008-2009

### 3.5 Cost of school meals

The average lunch price in LA catered primary schools was $£ 1.77$, and $£ 1.88$ in LA catered secondary schools (Table 10). This represents a 6\% increase on 2007-2008. Costs in special schools were similar in both sectors, but the increase in price was slightly greater ( $7 \%-8 \%$ ). Variations in mean prices were small between regions, but the minimum and maximum prices varied substantially both within and between regions, ranging from $£ 1.40$ to $£ 2.43$ in primary schools, $£ 1.34$ to $£ 2.62$ in secondary schools and $£ 1.37$ to $£ 3.50$ in primary special schools and $£ 0.84$ to $£ 3.50$ in secondary special schools.

An estimate of the balance sheet for the elements of the school meals service is shown in Section 3.11.3.

- Information not available for special schools

### 3.6 Facilities for food preparation

Table 11 shows, by region, the proportion of schools with different types of food preparation facilities. Information on facilities in LA-catered and non-LA catered provision is shown in Table 12 and Table 13, respectively.

About three-quarters of primary schools had full production kitchens. Six percent had either regeneration or mini kitchens, and $13.5 \%$ had no facilities, with hot food transported from another school or other source. Three percent had no facilities and supplied cold food only or had a FSM only service, which is an improvement compared with the 5\% reported in 2007-2008.

In secondary schools, $94 \%$ had a full production kitchen. The values were little different from last year, except for an increase in the number of 'unknown' (because of a higher response rate and the inclusion of non-LA catering provision).

### 3.7 Improving the take up of free school meals

Respondents were asked what steps were being taken within LAs to improve the take up of free school meals amongst those who are eligible Table 14. Twelve of the 129 responding LAs reported that no steps were being taken, whilst half said that they were working to reduce the identification of pupils eligible for free school meals. Compared with 2007-2008, more LAs were sending letters to parents to encourage FSM registration (48\% vs $33 \%$ ), more were using the DCSF "Hub" ( $54 \%$ vs $25 \%$ ), and more were supporting schools with suggestions to increase FSM take up ( $48 \%$ vs $40 \%$ ). Of the 117 LAs taking some steps, most were undertaking more than one action. The majority of the 68 'other' replies detailed a marketing strategy, 16 of which involved advertising on posters and plasma screens in local public areas, 11 LAs wrote articles for school websites and newsletters, 5 LAs held tasting sessions for parents and new starters. Six LAs responded that they were trying to increase the ease for parents to sign up for free school meals and five LAs reported trialling their own eligibility checking system.

Table 14. Steps taken to improve take up of FSM among those who are eligible
Number of LAs planning to use method
No steps being taken 12

Sending letters to all parents encouraging take up of FSM entitlement 48
Sending letters to selected parents encouraging take up of FSM entitlement 21
Sending letters to all head teachers encouraging take up of FSM entitlement 45
Changing arrangements relating to payment for FSM to reduce identification of FSM children (e.g. cashless catering, removal of tokens)50

Supporting schools with suggestions to increase FSM take up in schools (e.g. having dedicated administrative staff in schools) 48
Using the new DCSF 'hub' to check entitlement to FSMs 54
Other (up to three other initiatives allowed)*

* 52 LAs gave one 'other' answer; 11 LAs gave two 'other answers; five LAs gave three 'other' answers.

### 3.8 Change in demand

Catering providers were asked to think about factors thought to be responsible for either the fall or the sustained or rising demand compared with last year. The findings are shown in table 15 and Table 16 respectively. The reasons are listed in descending order of frequency as reported for primary schools.

## Fall in demand (Table 15)

In primary schools, the most common reasons given by LA's for the fall in demand was the provision of packed lunches (partly as a result of the provision of healthier options) and an increase in price. In secondary schools, the fall in demand was attributed to the introduction of healthier options and a consequent increase in the number of pupils bringing a packed lunch or buying lunch elsewhere (coupled with an increase in the number of locally available options for pupils outside of school). As last year, shorter lunch hours and poor organisation of the meal service were also considered relatively important factors in contributing to a fall in demand for school meals.

Steady or increasing demand (Table 16)
In both primary and secondary schools, school policy, marketing of meals to pupils, and improved dining facilities were cited as key reasons for a steady or increasing demand. In primary schools, marketing to parents, better kitchens and better trained staff were all seen as important. In secondary schools, introduction of a stay-on-site policy and better queuing arrangements were also seen as key factors.

| Percent of caterers |  |  |  |  |  |  |  |  |  |  |  |

$\begin{array}{lccccccc}5.1 & 3 & 5 & 11 & 27 & 31^{* *} & 32.6 & 0\end{array}$ demand in primary schools (i.e. $33 * 1+9 * 2+4 * 3$ reasons). $* * 95$ respondents in total: 22 respondents gave one 'other' reason, six gave two 'other' reasons, and three gave three 'other' reasons for decreased demand in secondary schools (i.e. $22^{*} 1+6^{*} 2+3 * 3$ ).

### 3.9 Food-based and nutrient-based standards: compliance and support

### 3.9.1 Meeting the standards

In primary schools with LA catering provision, responses suggest that 95\% of schools were compliant with both the food-based and nutrient-based standards (Table 17). For non-LA catered provision, half of the LAs were not able to report information about whether or not the standards had been met in the primary sector. In those that could be reported on, almost all were reported to be compliant with the standards.

In the secondary sector with LA catering provision, about $35 \%$ were said to meet the standards and almost half did not. In non-LA catered, three-quarters were 'not known', and only $14 \%$ were reported to be compliant, but it is difficult to draw any meaningful conclusions because of the high proportion of 'Not known'. These values for compliance were expected to be higher from September 2009 when secondary schools have to comply with the nutrient-based standards

Base (unweighted) LA catered: 143; non-LA catered: 144

### 3.9.2 Types of evidence

Table 19 shows the types of evidence quoted by LAs used to justify their views regarding levels of compliance with the nutrient based standards. In LA catered provision, the majority had evidence from nutrient-analysis software or the menu cycle, although many relied also on assurances from catering providers or nutritionists. A small number simply 'assumed' that they were compliant. In the secondary sector, the proportions were similar, although a higher proportion said they had 'no evidence'.

|  | No evidence | Table from software | Menu cycle | Other analysis | Assurance from catering provider | Assurance from nutritionist | Assumed |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $n$ | $n$ | $n$ | $n$ | $n$ | $n$ | $n$ |

10 Schools gave 1 other reason for primary LA catered 3 Schools gave 2 other reasons for primary LA catered 1 School gave 1 other reason for primary non-LA catered.
3 schools gave one other reason for secondary LA catered.
2 schools gave one other reason for secondary non-LA catered.

### 3.9.3 Monitoring compliance

Just under half of LAs monitored compliance in schools where provision is not provided by the LA (Table 20), although this appeared to vary markedly by region which may be partially explained by the fact that LAs are not legally required to monitor compliance.

| Table 20. Number and percentage of LAs that monitor compliance with school food standards in <br> schools where catering services are not provided by the LA |  |  |  |
| :--- | :---: | :---: | :---: |

| Bas: 130 LAs |  |  |  |

Base: 130 LAs

### 3.9.4 Use of professional support

Of 146 LAs that responded to the question about use of professional support, 85 said that they had had help from a professional (a nutritionist or dietician) to carry out analyses in relation to the nutrient-based standards. Of these 85,45 said that the help was provided as part of their school food catering team, and 24 said the help was provided by the Primary Care Trust (PCT). Some had help from more than one
source: a further 14 said that they used the services of freelance consultant, nine had services provided by a catering company consultant, and a further 19 obtained support from other sources.

### 3.9.5 LA purchases of software

Of 136 responding LAs, 109 had purchased menu planning and nutrient analysis software. Of these 109, 18 shared the software with all schools in their LA, but 66 used it only with schools with LA provision. 25 had other arrangements, typically sharing with in-house catering services plus one or more other sectors specified such as nurseries or schools providing their own catering services.

### 3.10 Healthier meals: attitude and support

### 3.10.1 Pupil attitudes to healthier meals

About two-thirds of LA respondents thought that primary pupil attitudes to healthier school meals had improved in the last year, and none thought that it was worse (Table 20). In the secondary sector, about one-quarter thought the attitudes had improved and $60 \%$ had remained about the same, but $15 \%$ thought that attitudes were worse, especially in the East, South East and London.

Table 21. Pupil attitudes to eating healthier meals: change over one year to April 2009

### 3.10.2 Level of support for healthier meals

Providers were asked to indicate how keen primary and secondary schools were to develop healthier school meal services and about the level of political support for such development (Table 22). In about one-fifth of secondary school services, support for healthier meals was felt to be low or very low. About one-sixth felt that political support among elected council members was also low or very low.

### 3.11 Finance

### 3.11.1 Operating expectations

In principle, almost $80 \%$ of LA caterers were expected to break even (Table 23), and only $14 \%$ were expected to operate at a deficit. In practice, $33 \%$ said they broke even and a further $20 \%$ made a profit, with $40 \%$ in deficit. This was a substantial improvement from the previous year, however, in which over half were in deficit and only $45 \%$ broke even or made a profit. However, of the 36 LAs that indicated that their catering service broke even in 2008-2009, four commented that this was achieved by including the School Lunch Grant or an agreed LA subsidy. It is also important to note that the additional information given by LAs suggests that there is considerable variation in the method used to calculate financial outcomes and although Table 23 reflects accurately the information reported by LAs, the information may not be directly comparable between all these authorities.

### 3.11.2 Delegation of budgets to primary schools

LAs delegate the catering budgets to all secondary schools. The majority (88\%) of LAs now also delegate the catering budgets to primary schools (Table 24), although this varied from 69\% in the South West to 100\% in East of England and Inner London. Of the schools to which the budgets were delegated, over half (57\%) returned the money to the LA to provide the service, while just over a quarter retained the budget under their own management, although again this varied considerably by region.

### 3.11.3 Use of Central government funding

Government allocated $£ 240 \mathrm{~m}$ to school food for 2008-2011. The money was ringfenced to cover the cost of food ingredients, labour to support healthier meal preparation, menu planning and nutrient analysis software and professional support, and small pieces of equipment. In 2008-2009, most LAs put the money towards the cost of ingredients and small pieces of equipment, as well as labour and menu planning (Table 25). For next year, the intention again was to spend the grant on the cost of ingredients, but could also be used for extra labour and equipment.

| GOR code | LAs $n$ | Cost of food \% | Extra labour \% | Equipment <br> \% | Menu planning $\%$ | Professional support \% | Other \% | Not decided \% |

Base (unweighted): 2008-2009: 127; 2009-2010: 132
Of the 74 LAs that indicated when the funding was distributed to schools, two-fifths did so at the start of the financial year, a further quarter in September, and the remainder throughout the year or to settle the end of year budgets.

Balance sheets were computed for those LAs that were able to provide information on ingredients costs, labour costs and overheads. In all government regions the production costs exceeded the charge out price of a school meal, suggesting that in order to break even schools must be relying on subsidies and LA grants. The results should be treated cautiously as responses to this section of the questionnaires have not been verified by the Trust and the different elements might have been provided by different people within an authority without being cross checked internally. Also, in the secondary sector, the charge out price is based on the value in the dining room of
a FSM and thus is may not be identical to the average amount actually being spent per paying pupil.

Base (unweighted): Primary: 63 LAs; Secondary: 56 LAs

### 3.12 Staffing and pay rates

### 3.12.1 Staffing

Eighty-nine LAs reported on the numbers of catering staff employed (Table 27). Compared with January 2008, ${ }^{11}$ the average number of staff directly employed in delivering the catering service in schools has decreased slightly, from 486 to 465. Despite this apparent decrease in actual staff, the number of cooks hours and primary school head cooks hours increased compared with last year (Table 28).

Base (unweighted) 17 LAs provided information about one other job title; seven LAs provided information about two other job titles; three LAs provided information about three other job titles.
Percentages are row percentages

### 3.12.2 Pay rates

The figures presented in Table 29 show average hourly rates of pay for different grades of catering staff. The number of responses for each element varied due to some LAs operating different staffing structures, and some being unable to provide the detailed information requested. A number of LAs provided contextual information, for example that rates were pre or post single status awards, that additional benefits such as retainer pay were offered, and that pay depended on the number of meals produced. Rates increased since last year by as much as $8.9 \%$ (the minimum point on the pay scale for a primary school head cook) and as little as $4.1 \%$ (for a 'cook'). There were some regional variations, with the highest pay rates seen, as expected, in London. Pay rates may not be comparable across LAs are there is not a universal job/pay structure.

### 3.13 Policy and Strategy

### 3.13.1 LA food strategies

Just over one-half of LAs reported that they had a food strategy plan (Table 30). 85\% of those responding said that school meals featured in their LA's Children and Young People Plan. Only 15\% of LAs responding reported having a policy restricting unhealthy food outlets near to schools.

| Region | LAs with food strategy plan |  | LAs with school meals featuring in Children and Young People Plan |  | LAs with policies restricting unhealthy food outlets nearby |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Total | 73 | 57.0 | 108 | 85.0 | 19 | 14.8 |

Base (unweighted) 128 responded: 'Food strategy plan'; 127 responded: `Children and Young People Plan; and 128 responded: 'Restricting unhealthy food outlets'.
3.13.2 Stay on site policies in secondary schools

Sixty-one of 107 LAs with LA catering provision reported having some form of stay on site policy for secondary schools. The policy applied to about half of the schools in these 61 LAs. In contrast, in the non-LA catered sector, only 28 out of 123 LAs reported having a stay on site policy, although this applied to $64 \%$ of schools in these 28 LAs (Table 31). Base (unweighted): catered for by LA 107 LAs; not catered for by LA 123 LAs

3.13.3 Cashless systems in secondary schools

Just over two-fifths (44\%) of LA catering providers reported using cashless systems in secondary schools, although this varied from as low as $25 \%$ in outer London to $74 \%$ in North East (Table 32). Fewer schools in the non-LA catered sector reported using cashless systems (37\%).

| Total | 104 | 74 | 1024 | 450 | 43.9 | 128 | 52 | 695 | 260 | 37.4 |

Base (unweighted): catered by LAs: 104; not catered by LA: 128.

### 3.14 Training

Of the 98 LAs that responded, at least three-quarters provided in-house training for all categories of staff except cooks, for whom $56 \%$ provided in-house training (Table 33). External training was provided less frequently. The precise focus of the training (both internal and external) was not specified, whether it was food hygiene based, related to cooking skills, or covered other topics e.g. manual handling and fire safety.

### 3.14.1 Use of FEAST network

91 LAs said that they were aware of the FEAST network. Of these, 19 LAs that said had used FEAST for training (including three that were FEAST centres themselves).

## Table 33. Training of catering staff, by job description and region

| Total | 97 | 60 | 61.9 | 51 | 52.6 | 38 | 39.2 | 71 | 73.2 | 63 | 64.9 |

Base (unweighted) 98 Las responded for 'in house' training. 97 Las responded for External training. 17 LAs provided in house training to 1 other group of employees, 5 LAs to 2 other groups of employees and 3 LAs to 3 other groups of employees. 11 LAs provided external training to 1 other group of employees, 7 LAs to 2 other groups of employees and 2 LAs to 3 other groups of employees. Note: the precise focus of the training (either internal and external) was not specified, and would include that which is food hygiene based, related to cooking skills, or other areas such as manual handling and fire safety

## 4 Discussion

### 4.1 Data quality and sample representativeness

The introduction of NI 52 as a national indicator means that, for the first time, all LAs are required to report take up for schools both within local authority catering contracted provision, and those who have opted out of such provision and organise their own catering. While there have been some difficulties, the majority of LAs have risen to the challenge with the result that estimates for the take up of school lunches are based on much higher coverage than in previous years, leading to greater generalisability of results. In addition, the remainder of the questionnaire has also benefitted from this improved response rate, although the completeness of the returns varied between LAs which accounts for the variations in the bases quoted for each table. This also affects coverage (percentage of schools in LAs for which data are reported) for each section and this is clearly stated where appropriate.

The change in reporting of school lunch take up, as a result of the introduction of NI 52, means that the results reported here (and in July's First Statistical Release ${ }^{9}$ ) are not comparable with figures published in previous years. It does mean, however, that all subsequent estimates will be comparable, albeit based on different coverage. The extent to which this affects the estimate depends on how biased the sample of schools is. For example, if the non-reporting is random and not associated with any school characteristic, the reported take up should be a good estimate of the overall take up. If, however, there is some systematic non-reporting by schools that have either high or low take up, the estimate reported in this report will be slightly biased.

Despite the improvement in response rate and coverage it is evident from the responses that, as in previous years, authorities with an in-house provider are more likely to have access to detailed management accounts than those authorities that are more remote from meal provision. The Trust will continue to work closely with LACA and all local authorities to improve the reporting of this more complex information. In the meantime, however, we are confident that the findings presented here are representative of LA school meal provision in England and also offer the best indication to date of school meal provision in schools that have opted out of LA meal provision.

### 4.2 Findings

The findings indicate that take up of school lunches in primary schools, using the standardised NI 52 method, is $39.3 \%$, which reflects the take up of $39.9 \%$ in schools with LA catering provision to a greater extent than that in the fewer non-LA catered primary schools where it was $35.8 \%$. In contrast, take up in LA catered secondary schools is slightly lower, at $34.1 \%$, than in schools that have opted out of LA catering (36.1\%). Overall secondary school take up is $35.0 \%$, indicating the fairly even levels of take up between both types of provision. Due to the change in method, it is not possible to make comparisons with previous years. Although the coverage (the number of schools reporting take up) has increased considerably compared with previous years, there is still some under-reporting in schools with non-LA catering. This applies in particular to the secondary sector. However, it is anticipated that in
future years the coverage for secondary schools will more accurately reflect the proportional split between LA catered and non-LA catered schools. The introduction of the food-based, and latterly the nutrient-based, standards for school food, means that all pupils who are taking school lunches now have the opportunity to eat a healthy meal that provides a balanced element of their daily nutrient requirement.

An important element in the drive to increase take up of school lunches is to improve knowledge of entitlement for free school meals, and subsequently to encourage take up by those who meet the entitlement requirements and are classed as eligible. This is particularly important in the current economic climate as it ensures that pupils who might be at particular risk of a poor diet have access to at least one nutritionally balanced meal each day. It is encouraging that more LAs recognise the importance of FSMs and are actively promoting them compared with 2007-08, with the majority of LAs reporting taking more than one action to highlight the availability of free school meals.

As in previous years, the driving factors for increasing the take up of school lunches include embedding school food within the school policy. To maximise take up, schools should continue to work closely with parents (particularly in the primary sector) and pupils, and The Trust's continued work around modifying the dining room should also be of particular benefit to secondary schools. It is encouraging to note that two-thirds of primary pupils were considered to have an improved attitude to eating healthier school meals compared with April 2008..

There is no real evidence that the predicted challenges around the introduction, in September 2008, of the nutrient-based standards in primary schools has had a negative effect on take up, but this will become clearer as the standards become embedded into the school lunch service. The coming year will see the introduction of the same standards in special and secondary schools where it will be particularly important to maintain the impetus in marketing healthy school lunches to pupils to minimise any negative effect in take up associated with these changes. Although there has been some concern that secondary schools will struggle to comply with the nutrient-based standards, the results from our survey suggest that, where information is available, this is not likely to be such a challenge as predicted, since it was reported over a third of secondary schools already complied with the nutrient-based standards. However, it remains essential to work with schools in all phases of education to ensure that adequate evidence is produced to confirm compliance with both the food-based and nutrient-based standards. Future publication on the Trust's website of the Audits and Inspections Toolkit will enable schools to monitor their own evidence of compliance.

The current economic climate also has implications for school meals in terms of providing a viable service despite increasing material and staffing costs. Although there was a slight increase in the proportion of LAs reporting that they broke even, compared with 2007-08, some LAs commented that this was achieved only through the use of a subsidy. Detailed study of the returns suggest that there was inconsistent reporting with other LAs who had used a subsidy to break even actually reported operating at a deficit. An increase in the price of school meals is still considered, by LAs, to be a major contributor factor in the fall in demand for school lunches. This might be particularly relevant as the average increase in the price of
both a primary and secondary meal was $6 \%$ compared with 2007-08 whereas the previous yearly increase was just under $3 \%$. With this level of price rise required to at least partly cover increases in ingredients and staffing costs it is important that schools and LAs continue to work together and with the Trust to offer value-formoney nutritious meals in an increasingly competitive market.

The importance of having adequate food preparation facilities cannot be underestimated, and it is reassuring to note the decrease in the proportion of schools that have no facilities and either have to transport food from another school or another source or offer only cold food or sandwiches. This continues the trend seen in 200708 and is in line with initiatives in a number of authorities to re-introduce a hot meal service.

During the coming year the Trust will continue to work with all stakeholders to maintain the move towards improving the profile of school food, not only in schools but among the wider beneficiaries. These include pupils who will benefit from an improved diet, parents who can potentially gain financially, and teachers who will be able to teach in a calmer classroom. In order to achieve these objectives the Trust is planning to ensure as many schools as possible take advantage of the support and advice available building on its range of existing programmes, all of which have the common themes of increasing take up, improving quality, and promoting healthier eating in schools.
